# Money Experiment Plot

Curtis Kephart for Justin Ritz

Winter, 2016

Money Experiment Notes

Plot notes:

- Vertical black bars separate sequences.
- Blue line segments indicate spells this subject held a Blue ticket.
- Colored scatter points indicate different types of possible trades are rejections.
- By implication, no scatter point means one of two things:

  - No trade was possible
  - Or if I had a Blue ticket, I didn't make an offer but the other trader did.

The mark down doc `DataNotes.md` describe the session data `MoneyExperimentsResults.csv`. The r script, `01_dataCleaning.R` cleans the data, and `BlueTicketTradingPlots.R` implements the plot. Also see the helper data frames `M.E.df.plotPrep` and `BlueTicketHolder_startstop` for insight into the steps taken.
